Connection reference for Databricks

You need specific information to establish a seamless and secure connection. The following fields are required, except where noted.

Connection name
    Enter a new Databricks connection name.

Connection description
    Provide a short description of the connection. *(Optional)*

Host
    Enter the Databricks server host name without the protocol.

    Example: **dbs.example.cloud.databricks.com**

HTTP Path
    Enter the Databricks HTTP path.

    For Databricks hosted on Microsoft Azure, you must specify both HTTP path and port. For more information, see Get server hostname, port, HTTP path, and JDBC URL

User
    Email address associated with your Databricks account.

Password
    Specify the password of the Databricks account.

    For Databricks hosted on Microsoft Azure, you must specify the API token from Databricks. For more information, see Authentication using Azure Databricks personal access tokens
